

# JFK MEMENTO

A CHRONICLE OF THE ASSASSINATION

## Production & Technical Requirements for Project Presentation

- Physical footprint: ideally 15x15 meters for four people (4.5 x 4.5 meters is what we had at SXSW)
- Installation details: interactive VR within a headset
- Type of XR devices used: VR headset, one controller, and ideally headphones
- The controller is only needed to start the experience, not during it
- As this is an interactive linear film, the setup can remain basic
- We like to have the watching area separated from the gallery by black drapes so people feel more comfortable when wearing the VR headset
- We display a trailer of the experience outside on a large screen
- We print visuals of the experience in a wide format to hang outside next to a table or counter space

There is no mandatory element to purchase.

It will vary depending on the total space available, the duration of the exhibition, and what is provided by the festival.

In case of selection, an introductory call would be useful to size costs.
